Fiery EngraveLab 11.6 Overview

This release fixes a commonly occurring crash for specific module users, allowing users to continue to use EngraveLab without further disruption.

Fixes

- Fixed a crash that would occur when attempting to output a job containing toolpath data while the machining module was enabled.

Software Support and Requirements

Supported Operating Systems

- Windows 10
- Windows 11

Recommended System Requirements

Operating System	Windows 11
Memory	16gb RAM
Storage Space	SSD with 50gb of available space
CPU	Multicore Intel® or AMD processor, 3GHz or faster
Resolution	1080p or 4K

Minimum System Requirements

Operating System	Windows 10
Memory	8gb RAM
Storage Space	HDD with 50gb of available space
CPU	Multicore Intel® or AMD processor, 1.7GHz or faster
Resolution	720p

Network Security

Fiery's EngraveLab includes a variety of features and functions that utilize network communications. Disruptions to the network or incorrect permissions can inhibit the ability to obtain proper drivers or prevent validation of the software. Network permissions should not be modified without the assistance of a network administrator or technical support.

Network Ports

When checking the availability of the network, or installing anti-virus software, make sure the following ports are not blocked.

Port Name	Purpose
443	Device driver downloads
443	HTTPS requests with Fiery server infrastructure

Conclusion

Fiery Specialty Production is proud to deliver these updates to enhance your experience with our software. This release brings new or improved features, important bug fixes, and valuable security patches to ensure optimal performance and safety to make your machines run better.

As always, we appreciate your feedback to help us continue refining and innovating. If you encounter any issues or have suggestions, please reach out to our support team. Thank you for choosing Fiery Specialty Production Applications.
