

Customer User Addendum

Fiery FreeForm Create, version 2.0.0.29

This document contains important information about this release. Be sure to provide this information to all users before proceeding with the installation.

Note: The term “FreeForm Create” refers to Fiery FreeForm Create in this document.

With FreeForm Create, you create variable data printing (VDP) jobs in a visual, user-friendly application.

VDP jobs combine a set of master elements that are common across copies of a document with a set of variable elements that change from copy to copy.

This lets you create personalized communications, such as a brochure that greets customers by name and includes other personal information obtained from a database. Background elements, illustrations, and text blocks that do not change across copies of the brochure are master elements. Names and other customer-specific information are variable elements.

Issues fixed in version 2.0.0.29

Message instructs user to "Save the job before sending to Fiery"

FreeForm Create could prompt the user to "Save the job before sending to Fiery" after clicking **Send to Fiery** from a recently created and previously saved design, when no changes were made to the design.

Incorrect number sequence is created

When you drag and drop a numbering sequence to the **Design window** and provide start and stop values, then drag and drop a second numbering sequence to the **Design window** and provide different start and stop values, the second numbering sequence does not honor the different start and stop values, and duplicates the first numbering sequence start and stop values.

Cannot drag and drop PDF into "Choose Master document" screen

Drag and drop does not work for dropping a PDF file into the "Choose Master document" screen. Clicking **Browse** and selecting a master PDF works, but drag and drop does not work.
