Fiery SignLab 11.3 Overview

The 11.3 update for SignLab includes multiple additions to the Badging feature, the new Text to Barcode conversion, and numerous requested fixes and improvements to existing features.

New Features

- Badging has now been updated to include clone text support. When badged text is created as clones, the following functions are supported through the clone behavior: Font, Size, Kerning, Color, and Justification.
- Added a new convert Text to Barcode button in the text tools menu.
- Introduced a Favorite font group in the fonts list.
- Users now have the ability to add the From Catalog button to their toolbar via the Customize Toolbar options window.
- Added the Graphtec CE 8000 series drivers.

Changes and Improvements

- Implemented minor adjustments to the barcode UI to improve visual clarity.
- Updated Excel spreadsheet support to allow selecting different sheets within an Excel file. Easily assign information from supported file types to text substitution with the new supporting user interface.
- Updated a warning message that could occur during the Badging workflow to improve clarity to the user.
- Updated Summa cutter drivers to work with new registration mark systems.
- The Vectorization preview window can now be increased or decreased in size to improve the viewing experience.
- Updated the Bezier edit UI to include the distance a node was moved. This information is located next to the current coordinates.
- Added the ability to round corners in the Weed Border state.
- Added the ability to filter columns by header in the text substitution window of the badges workflow.

Fixes

- Fixed an issue which caused text justification to be incorrect when generating a DXF file.
- Fixed multiple issues which would cause DXF files to distort or corrupt upon import.
- Fixed an issue in which a "No Device Found" warning would unintentionally appear when using the badging workflow.
- Fixed an issue where exporting certain elements to an .svg file would erroneously include large amounts of white space.
- Fixed a crash that would occur when attempting to edit parameters in the Tool Library.
- Fixed an issue where the centerline preview would attempt to update when the values in the box were not modified.
- Fixed an issue where Badges would erroneously keep data when using the Undo button.
- Fixed a crash that would occur when editing the kerning of text with Fit to Path applied.
- Fixed an issue where Summa S3 cutting devices had their names incorrectly shortened in the cutter install list.
- Fixed an issue where symbol fonts would unintentionally display in an undesired folder.
- Fixed an issue where the Change Case button would not correctly change the case of all text.
- Fixed an issue where size UI would not update when rotating in the cut state.

Network Security

Fiery's Digital Factory includes a variety of features and functions that utilize network communications. Disruptions to the network or incorrect permissions can inhibit the ability to obtain proper drivers or prevent validation of the software. Network permissions should not be modified without the assistance of a network administrator or technical support.

Network Ports

When checking the availability of the network, or installing anti-virus software, make sure the following ports are not blocked.

Port Name	Purpose
80	Device driver downloads
443	HTTPS requests with Fiery server
	infrastructure

Conclusion

Fiery Specialty Production is proud to deliver these updates to enhance your experience with our software. This release brings new or improved features, important bug fixes, and valuable security patches to ensure optimal performance and safety to make your machines run better.

As always, we appreciate your feedback to help us continue refining and innovating. If you encounter any issues or have suggestions, please reach out to our support team. Thank you for choosing Fiery Specialty Production Applications.
