Roland DG TrueVIS LG-300/540/640

This document bridges the gap between the Fiery XF documentation and the Roland DG TrueVIS LG-300/540/640 documentation.

Refer to the Installation section before you connect the printer to a computer. The operation section has information on profile generation and everyday use. Please refer also to the documentation shipped with your printer, which you can also download from here.

General settings

The printer driver supports the printers: Roland DG TrueVIS LG-300, Roland DG TrueVIS LG-540 and Roland DG TrueVIS LG-640.

Environment requirements are as follows: The driver is available for Windows only. This printer connects via network port to the XF server.

Products based on Fiery XF technology: Fiery XF 7.3.3 add-on

Changing the print head configuration

There are printers with the print heads swapped which enable user to print layers like White/Gloss on CMYK instead of CMYK on White/Gloss. E.g. if there is a print mode named "High Speed|8p (CMYK->Wh)", it will print CMYK on White with the default print head configuration, but if the print heads are swapped in the printer, then it will print White on CMYK. To make sure that the printer and driver are using the same print head configuration, the user needs to check this setting at the bottom of the special settings tab.

If the print heads have been swapped in the printer, then user should swap the print head position values in the driver as well, i.e., the list under "1" should be set to 2 and list under "2" should be set to 1.

Operation

Color Tools settings

- **Dot size**:

  The dot size cannot be selected. The printer driver decides which dot size (Variable, Fixed, etc.) to use.

- **Ink type**:

  This printer supports only Eco-UV5 ink.

- **Layered printing and split head control**:

  Please see also "Layered Printing and Split Head Control" for Roland DG printers for details.

Print mode information:

FS = Feed Speed(mm/sec). SS = Scan Speed(mm/sec). DS = Dot Size Definition. DT = Dot Type. Pass = PassesPerLine.
