RELEASE NOTES

EFI™ is pleased to announce the release of Fiery® proServer for Cretaprint 2.0. This latest release is available free of charge to all customers who have their Fiery proServer for Cretaprint covered under an EFI Software Maintenance & Support Agreement (SMSA).

Highlights:

- Color – Smart Ink Saving feature
- Color – Color engine enhancements
- Productivity – Performance gains for profile creation and design conversion
- Usability – Welcome screen displaying useful Fiery proServer product information

Color Improvements:

- The new Smart Ink Saving feature reduces ink costs even further by considering actual cost per ink and calculating the most affordable ink combination possible for each pixel of a design. Feedback from the Fiery means users can find the ideal balance between color quality, and cost reduction for each individual design.
- Color engine enhancements deliver superior profile creation results compared to previous versions resulting in more precision for prototype printing and design conversions.
- Two new rendering intents, Relative and Dynamic are now available. Based on the glaze color of the final tile, the Dynamic selection means the most appropriate rendering intent is automatically used, resulting is little or no color loss in lighter areas or on lighter designs.

Productivity Improvements:

- The ColorWise profile creation process in now up to 5 times faster.
- Users will see up to an 18% increase in RGB design conversion performance.

Usability Improvements:

- A new status bar is introduced to monitor the progress of the upload or download of large variation files.
- A welcome screen greets users at the Fiery client launch with useful information on what's new within their installed software, plus did you know hints and tips on getting the best from the Fiery proServer.
- An online update notification alert now advises users of any new updates that become available from within the proServer client.
- N color profiles are now copied into the input source folder automatically after new profile creation for easy assigning of input source profiles.

System Improvements:

- The Fiery proServer for Cretaprint 2.0 client, server, and all included tools now support the Turkish language.
- Mac OS X 10.11, El Capitan, is now supported by the Fiery proServer client, and all included tools.
